

✓ Typeface Guide for Website Redesign

1. Logo Typeface (Home Page Header Logo)

- **Font: Barber Fill**
- **Use:** This font should be used for the main "**Beavers Tree Service and Landscaping Inc.**" logo at the top left of the homepage.
- **Style Goal:** Bold, classic, and strong — communicates craftsmanship and trust.

□ If Barber Fill is not available in their web development tools, ask the developer to find a **similar bold vintage display font** and confirm with you before finalizing.

2. Body Text Typeface (Throughout Site)

- **Font: Open Sans**
 - **Use:** For all paragraph text, descriptions, service info, contact sections, and standard website copy.
 - **Style Goal:** Clean, modern, professional, and highly readable on all devices.
-

3. Optional Supporting Fonts (Use for Headings, Buttons, etc. if needed)

- **Montserrat** – Great for headers, pairs well with Open Sans
- **Lato** – Slightly more casual alternative to Open Sans
- **Raleway** – Clean and elegant; can be used for service titles or buttons
- **Poppins** – Geometric and modern, suitable for callout boxes or menus
